

Yes, if you're running **Kubernetes on Docker Desktop for Windows**, you can access the **Kubernetes Dashboard UI**, but it's not enabled by default. Here's how you can enable and access it:

✅ Step-by-Step to Access Kubernetes Dashboard on Docker Desktop

1. Enable Kubernetes in Docker Desktop

- Go to **Docker Desktop > Settings > Kubernetes**.
- Check "**Enable Kubernetes**" and wait until it finishes installing.
- You can confirm it's working with:

```
kubectl get nodes
```

2. Deploy Kubernetes Dashboard

Run the following command to deploy the official dashboard:

```
kubectl apply -f
https://raw.githubusercontent.com/kubernetes/dashboard/v2.7.0/aio/deploy/recommended.yaml
```

3. Create a Dashboard Admin User

Create a file named `admin-user.yaml`:

```
apiVersion: v1
kind: ServiceAccount
metadata:
  name: admin-user
  namespace: kubernetes-dashboard
---
apiVersion: rbac.authorization.k8s.io/v1
kind: ClusterRoleBinding
metadata:
  name: admin-user-binding
roleRef:
  apiGroup: rbac.authorization.k8s.io
  kind: ClusterRole
  name: cluster-admin
subjects:
- kind: ServiceAccount
  name: admin-user
  namespace: kubernetes-dashboard
```

Apply it:

```
kubectl apply -f admin-user.yaml
```

4. Get the Login Token

```
kubectl -n kubernetes-dashboard create token admin-user
```

Copy the token shown in terminal.

5. Access the Dashboard

Start a proxy:

```
kubect1 proxy
```

Then open this in your browser:

```
http://localhost:8001/api/v1/namespaces/kubernetes-dashboard/services/https:kubernetes-  
dashboard:/proxy/
```

Use the **token** to log in.
